

Required Report: Required - Public Distribution

Date: December 28, 2022

Report Number: PL2022-0022

Report Name: Food and Agricultural Import Regulations and Standards
Export Certificate Report

Country: Poland

Post: Warsaw

Report Category: FAIRS Export Certificate Report

Prepared By: Anna Galica, Jolanta Figurska, Mira Kobuszynska

Approved By: Alicia Hernandez

Report Highlights:

Poland applies European Union (EU) regulatory requirements for all food of animal- and plant-origin. Although the EU has harmonized export certificate requirements for most products, Poland maintains national-level oversight for products still not harmonized under the EU. Poland's competent authorities can be consulted on a case-by-case basis regarding requirements for non-EU harmonized products. The EU requires that all requisite products be accompanied by sanitary and/or phytosanitary certificates at the port of entry.

Report Highlights

Poland applies European Union (EU) regulatory requirements for all food of animal- and plant-origin. Although the EU has harmonized export certificate requirements for most products, Poland maintains national-level oversight for products still not harmonized under the EU. Poland’s competent authorities can be consulted on a case-by-case basis regarding requirements for non-EU harmonized products. The EU requires that all requisite products be accompanied by sanitary and/or phytosanitary certificates at the port of entry.

DISCLAIMER

This report was prepared by the U.S. Embassy Warsaw’s Office of Agricultural Affairs (OAA) for exporters of U.S.-origin food and agricultural products. While every possible care has been taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. Post recommends that U.S. exporters verify all import requirements with their foreign customers, who are normally best equipped to research such matters with local authorities, before any goods are shipped. This Food and Agricultural Import Regulations and Standards (FAIRS) Certificate report should also be read in conjunction with the OAA Warsaw’s 2022 FAIRS Annual Country report, as well as the EU-27 FAIRS reports prepared by the Foreign Agricultural Service, USDA U.S. Mission to the EU, which are available on their [webpage](#).

FINAL IMPORT APPROVAL OF ANY PRODUCTS IS SUBJECT TO THE IMPORTING COUNTRY’S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.

Executive Summary

EU legislation mandates various health and supervisory requirements to guarantee that imports meet the standards of production in Member States (MSs). The EU requires veterinary and/or general health certificates to accompany each shipment of meat and meat products, which must be signed and dated by competent U.S. certifying authorities prior to shipment. The EU also harmonized import requirements for plants and plant products, which are published in a single directive. Unlike veterinary products, the EU employs only one model certificate for all plants and plant products. Poland applies EU export certification requirements for imported products. Certificate details are established in specific legislation, including veterinary health certificate models (links included in this report).

I. List of Required Export Certificates

Poland applies EU export certification requirements for imported products. Required certificate details are set out in specific legislation, including veterinary health certificate models to be used (links included at the end of this report). The EU, including Poland, does not prescribe or specify to trading partners which eligible production should produce certain products for export to the EU.

EU legislation mandates many health and supervisory requirements to guarantee that imports meet the standards of production in MSs. The EU recognizes the United States as eligible to export some animal products. The EU requires pre-approval for export establishments, based on official U.S. requests. The U.S. regulatory agencies which typically determine export establishment eligibility to ship to the EU are the Food Safety and Inspection Service (FSIS), the Animal and Plant Health Inspection Service (APHIS), the Agricultural Marketing Service (AMS), the National Oceanic and Atmospheric Administration (NOAA), and the Food and Drug Administration (FDA). EU-approved establishments may be subject to EU inspections.

Following an update of the EU's Animal Health Law ([Regulation \(EU\) 2016/429](#)), which entered into force on April 21, 2021, the EU has updated all required certificates for products of animal origin. Models of the new certificates for food of animal origin were published by the EU and implemented by U.S. agencies. Several amendments to the new certificates were made since their first publication. They are available from [Commission Implementing Regulation \(EU\) 2020/2235 \(consolidated version July 14, 2022\)](#) and U.S. Government agencies are making use of the transitional periods foreseen in EU legislation to switch to updated certificate versions.

The EU requires each shipment of meat to be accompanied by veterinary and/or general health certificates which are signed and dated by a competent U.S. certifying official prior to shipment. Official certificates were also harmonized for the entry into the European Union of animals, products of animal origin, composite products, germinal products, animal by-products, sprouts for human consumption, and seeds intended for the production of sprouts for human consumption.

In accordance with [Commission Implementing Regulation \(EU\) 2020/2235](#), certificates must be issued before the consignments to which they relate leave the control of the competent authority. Non-compliance may result in rejection of shipment at the EU point of entry. The U.S. regulatory agencies that issue health certificates (FSIS, APHIS, AMS, and NOAA) have all included this requirement in their export libraries.

The EU also harmonized import requirements for plants and plant products, which are published under a single directive. Unlike veterinary products, the EU employs only one model certificate for all plants and plant products. This is consistent with international guidance as provided by the [International Plant Protection Convention \(IPPC\)](#). For the United States, APHIS issues the phytosanitary certificate with the requisite attestations to specific requirements of the EU. For more information, see the [export certification guide](#) at the [IPPC website](#).

EU certification requirements for some products may be partially or not harmonized. For such products, rules of the individual MS would apply. The import agent should have some guidance to provide on the MS requirement for that product. If not, request guidance on current requirements from the U.S. Embassy's OAA (see Appendix for contact information). U.S. regulatory agencies which issue export certificates usually identify specific MS requirements in their export libraries and guides.

II. Purpose of the Export Certificates

Poland conforms to all EU regulations and directives. Therefore, it is recommended that this report be read in conjunction with the U.S. EU OAA FAIRS Export Certificate Report available on their [website](#).

III. Specific Attestation Required on the Export Certificate

For the identity check of the shipment, the Polish Veterinary Inspection authorities require the container seal number be printed on the veterinary certificate. A seal number on the bill of lading is not sufficient, as these can be easily re-issued by private companies. In the models of the new certificates for food of animal origin, which were published in [Commission Implementing Regulation \(EU\) No 2020/2235](#), only the official seal number must be stated. An official seal number applies if a seal is affixed to the container, truck, or rail wagon under the supervision of the competent authority issuing the certificate. If no seal number is present on the certificate, a physical check may be necessary to verify the identity of the shipment.

IV. Government Certificate Legal Entry Requirements

Poland follows the general EU requirements. Polish legislation indicates the national authorities competent to perform duties established in the EU law.

Based on Article 15b of the 2004 Act on Veterinary Inspection (consolidated Polish version in Journal of Laws 2021, item 306), the border veterinary officer of the Polish Veterinary Inspection is the competent authority to carry out official border checks and perform other official activities concerning animals and goods at the Border Control Post (BCP).

According to the Regulation of August 27, 2003, on Veterinary Border Control (Polish Journal of Law 2003, item 1590), animals and products of animal origin may be imported if:

- The consignment contains an original veterinary certificate drawn up in at least one official language designated by the border inspection and the country of final destination issued by the competent authority of the country of origin
- Products are labeled in a way that can be identified

- Products come from the lists published by the European Commission (in the case of products for which import requirements are specified in the EU regulations)
 - List of authorized third countries or their parts; and
 - List of establishments authorized to introduce the products into the EU

The list of third countries from which imports of certain product are permitted to the EU and the lists of eligible establishments in those countries are published on the European Commission's website. These consolidated lists are published in accordance with the requirements of Article 127 of Regulation (EU) 2017/625 and [Article 5 of Commission Delegated Regulation \(EU\) 2019/625](#). The lists are available [here](#).

Veterinary border control takes place at BCPs approved in accordance with the Commission Implementing [Regulation \(EU\) 2019/1014](#) of 12 June 2019 which details rules on minimum requirements for border control posts, including inspection centers, the format, and categories and abbreviations used for the lists of border control posts and control points.

V. Other Certification or Accreditation

According to the 2006 Act on Feed (consolidated version in Polish in [Journal of Law 2021, item 278](#)), feeds or medicated feeds entering the customs territory of the European Union are subject to official inspection by a border veterinary officer in accordance with the rules set forth in Chapter V of Regulation 2017/625. As a result, with no harmonized rules at the EU level, in Poland feed with no ingredients of animal origin is subject to veterinary border checks.

Border control of feed is carried out at the veterinary BCPs listed in the Regulation of the Minister of Agriculture and Rural Development of August 3, 2022, on the list of border crossings where official control of feeds and medicated feeds may be carried out. Import of consignments of feed is possible from non-EU establishments which have a representation on the territory of Poland and are entered in the register of non-EU establishments kept by the Chief Veterinary Officer, or which have a representation on the territory of another EU MS. Article 36-41 of the 2006 Act on Feed set forth the rules for establishing the representation.

Appendix I. Electronic Copy or Outline of Each Export Certificate

Detailed information on export certification can be found in the U.S. EU OAA FAIRS Export Certificate Report available on their [website](#).

[Commission Implementing Regulation \(EU\) 2020/2235 \(consolidated version July 14, 2022\)](#) contains most import certificate samples required for various food products of animal origin, including:

- meat products
- poultry and products
- eggs and related products
- milk and dairy products.
