

Required Report: Required - Public Distribution

Date: January 10, 2023

Report Number: MO2022-0032

Report Name: Exporter Guide

Country: Morocco

Post: Rabat

Report Category: Exporter Guide

Prepared By: Mohamed Fardaoussi

Approved By: Robert Wright

Report Highlights:

This report provides an economic and market overview and practical tips for U.S. companies exporting to Morocco. The top prospects for U.S. agricultural exports to Morocco include feed grains (corn, DDGS, soybeans and soybean meal), tree nuts, pulses, live animals, genetics, animal fats and some consumer-oriented products (beef, poultry meat, dairy products, rice). Under the U.S.-Morocco Free Trade Agreement (FTA), a large number of tariffs for consumer-oriented products were phased out.

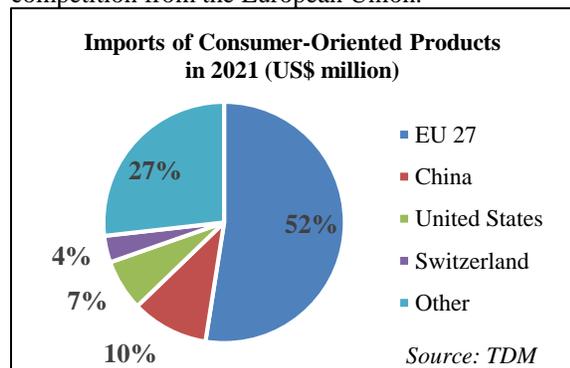

Market Fact Sheet: Morocco

Executive Summary

Morocco's food service industry started to recover in 2022, reflecting an increase in tourism arrivals as COVID-19 travel restrictions ease. U.S. exports of consumer-oriented products to Morocco doubled in 2021, reaching \$166 million. Morocco imports limited volumes of U.S. pre-packaged chocolates, seafood, sauces, and spirits. U.S. almond exports led growth in the consumer-oriented category.

Imports of Consumer-Oriented Products

In 2021, U.S. exports of consumer-oriented products to Morocco totaled \$166 million, a 32% increase from the previous year led by the phase out of tree nut tariffs. The United States continues to face strong competition from the European Union.

Food Processing Industry

Morocco's food processing industry is comprised of 2,050 registered companies and employs more than 159,500 people; approximately 85 percent of them are small size companies with less than 20 employees. Food processing sales are a major focus in the domestic market and generated about \$6 billion in 2021.

Food Retail Industry

In 2021, Morocco's food retail market represented 14 percent of GDP. The Casablanca-Rabat corridor accounts for about 50 percent of all modern retailers. Marjane Holding (Marjane and Marjane Market) and Label'Vie (Carrefour, Carrefour Market, and Atacadao) are Morocco's leading modern food retailers with other notables including Ynna Holdings (Aswak Salam) and the Turkish small format discounter BIM.

Quick Facts CY 2021

Imports of Consumer-Oriented Products

- \$2.4 billion from the World
- \$ 166 million from the United States

Strengths/Weaknesses/Opportunities/Challenges

Strengths	Weaknesses
U.S.-Morocco FTA provides market access and opportunities to use Morocco as a platform to reach African market.	Lack of U.S. exporter awareness on opportunities in Morocco.
Opportunities	Threats
Morocco is the most stable, pro-business economy in North Africa.	-Erosion of U.S. preferences vis-à-vis Morocco's FTA with the EU, Arab League. -Distance and Freight disadvantage.

Section 1: Detailed Market Overview

According to the [World Bank](#), Morocco's GDP growth rebounded to 7.9% in 2021 after contracting by 6.3% in 2020. Growth in Morocco is projected to slow to 1.1% in 2022, as agricultural output declines by 17.3% due to an unprecedented drought. A still solid but moderating industrial performance and a faster recovery of the tourism sector will continue to drive the economy.

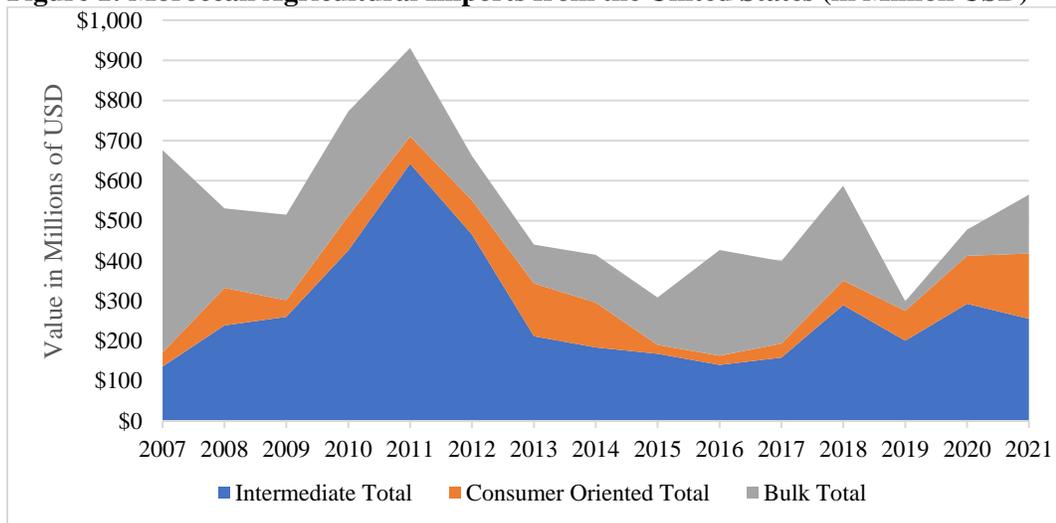

The Government of Morocco launched its second strategic plan for agriculture in February 2020. The new plan, named "[Génération Green 2020-2030](#)," sets out an agricultural development strategy through 2030. It has two major pillars:

- 1- Develop a new agricultural middle class representing between 350,000 and 400,000 households by supporting young entrepreneurs through the mobilization of one million hectares of collective lands and the creation of 350,000 jobs with a focus on high-value agriculture.
- 2- Promote human and social development.

Morocco has positioned itself as a regional hub for international companies active in Africa, the Middle East, and Europe thanks in part to its economic and political stability, openness to trade and investment, and strategic location. Unlike its regional neighbors, Morocco's economy and food sector are largely market driven.

Morocco is the only U.S. Free Trade Agreement partner in Africa, and the vast majority of import duties on U.S. agricultural products were either eliminated upon implementation on January 1, 2006 or phased out over the following 10 years. Morocco is a net importer of agricultural and related products. Morocco typically imports bulk commodities and raw materials from the United States and exports high-value, consumer-oriented products to the United States. The European Union is Morocco's primary trading partner, accounting for about 60 percent of Morocco's agricultural exports. In 2021, the United States and Morocco completed a health certificate for U.S. live aquaculture product exports to Morocco. Also, tree nuts reached record levels in 2021 following the phase out of tree nut duties in 2020.

Figure 1: Moroccan Agricultural Imports from the United States (in Million USD)

Source: Trade Data Monitor, *Bulk and intermediate exports consist primarily of animal feed ingredients.

Key Demographic Development

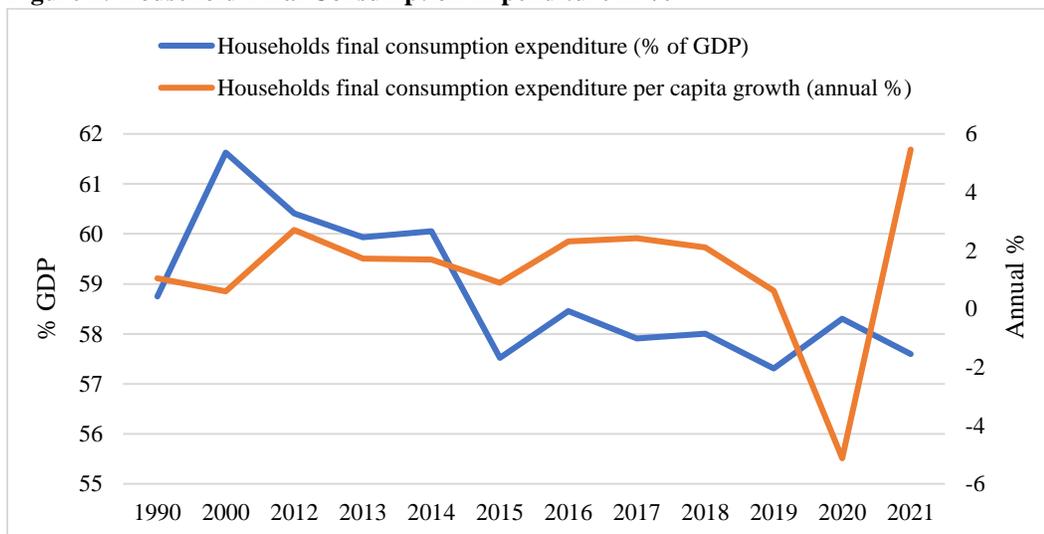

Morocco's population was estimated at 37.3 million in 2021, of which about 40 percent lives in rural areas. The population growth rate is currently about 1.23 percent per year with an estimated 62 percent of the population between 15 to 59 years old. The middle class is steadily increasing, and family sizes are falling, with an average of 3-4 children. The illiteracy rate is about 32 percent, although much higher in rural areas. Islam is the prevailing religion (over 97 percent) and Arabic the dominant language. While Moroccans understand classical Arabic, they typically speak the local dialect (Darija) which classical Arabic speakers may find hard to understand. French is the language most widely used in business, although English is increasingly spoken.

Moroccan home cooking remains traditional, but change is coming, especially in large cities where families are increasingly adopting western lifestyles. The number of women working outside the home is steadily increasing, leading to higher total family income. Families are turning to ready to eat or semi-processed products instead of traditional, time-consuming, homemade dishes. This is especially true in large cities like Casablanca, Rabat, Marrakech, Fes, Agadir, and Tangier, where distribution channels have significantly developed in recent years. Today, local producers and importers of consumer-oriented food products are able to deliver many new quality products to consumers in modern supermarkets.

Consumer Spending

Most demand for consumer-oriented food products come from large cities with higher income populations and active lifestyles. The lower-middle income group remains the largest population segment. However, the highest and lowest income classes are growing the fastest. Annual consumption expenditure was declining in 2019-2020 due to COVID-19 crisis.

Figure 2: Household Final Consumption Expenditure in %

Source: [World Bank](#)

Table 1: Advantages and Challenges

Advantages	Challenges
Mostly duty-free import regime for U.S. products.	Market Access: Morocco’s FTAs with the EU, Turkey, and Arab states undermine some advantages of the U.S.-Morocco FTA.
Moroccan consumers demand increasingly diverse consumer choices.	Proximity: European exporters benefit from lower shipping costs. Small vessels and trucking options allow smaller consignments at competitive prices.
As a regional trade leader , Morocco is home to efficient ports, roads and rail systems and is building infrastructure to serve as a trade hub for African markets.	Language: French (and to a lesser extent Arabic) is the predominant language of commerce. Moroccan importers traditionally do business through European brokers and traders. However, the next generation of Moroccan businesses are pivoting to English.
	Market Size: 37.3 million people, 40% of which are urban and 10% of which can afford imported food products.

Section 2: Exporter Business Tips

- Most importers are located in Casablanca and imports by container are mostly done through the port of Casablanca.
- In all major ports and airports, the Ministry of Agriculture has one stop shops for importers to clear all types of imported agricultural products. The entity in charge is the DCQ (Quality Control Division) which is a regional representative of the National Office for Food Safety (ONSSA). To clear customs, importers must present a sanitary certificate for all fresh fruits, and animal or vegetable products they import. A local laboratory analysis done by official laboratories may also be required to clear customs, especially for new and unfamiliar imported products.
- Often Moroccan importers are not familiar with products that are common in the United States. Also, many importers are not used to U.S. grades, standards, and appellations. Exporters are advised to provide pictures, brochures, or even samples to Moroccan importers. Many local importers require samples before making purchase commitments.
- Moroccans use the metric system for measurement.
- French is the predominant language of Moroccan commerce. Although there is a new generation of Moroccans that are shifting from French to English.
- Importation and distribution of food and beverage products in Morocco are handled by both regular importers and importers who operate on an opportunity basis. Regular importers market their products through their own sales force (typically to hotels, supermarkets, wholesalers) and independent well-established wholesalers (in the case of small shops, restaurants). U.S. exporters interested in selling consumer-ready food or beverages should find a local importer to access the retail market. Importers normally have in-depth knowledge of specific importing procedures.
- Exporters should avoid visits during Ramadan, but if travel is unavoidable during this period, exporters should hold their meetings in the morning. The holy month of Ramadan is not a

holiday, but business slows down significantly because Muslims fast during the day. Most restaurants close during this month; alcohol is not served, and people are not allowed to smoke during the day. In 2022, Ramadan will begin on Saturday, April 2 and last for 30 days until Monday, May 2.

- Goods transshipped through a third country port should be accompanied by:
 - A bill of lading showing Morocco as the final destination of the goods and the United States as a point of origin.
 - Invoices issued by the U.S. Company, addressed to the Moroccan importer.
- Morocco requires a non-GMO attestation if the term GMO is on the label. It is best not to include GMO.
- Close working relationships are often critical to concluding deals in Morocco. As in many markets, Moroccans base business on trust and mutual respect built over time. U.S. exporters should strongly consider travel to the country to develop and strengthen relationships. In addition, working with a locally based agent or distributor typically enables U.S. firms to sustain relationships, and to develop essential knowledge of key contacts, customs regulations, and niche opportunities. U.S. firms should also fully understand the regulatory environment and procedures before jumping into the market to avoid unexpected hurdles.
- Business practices in Morocco differ significantly from those in the United States. For example, bureaucratic procedures often require significantly more time to complete than in America and often require multiple copies of documents, stamped, and signed. Moroccans have rapidly adapted to cell phone technology and generally reply to text messages, WhatsApp, or phone calls more quickly than email communications. E-mail correspondence delays should not immediately be interpreted as lack of interest. If delays occur, U.S. firms should consider communicating by phone or texting.

Section 3: Import Food Standards & Regulations/Import Procedures

The U.S.-Morocco Free Trade Agreement went into effect on January 1, 2006. Under the agreement most United States goods enter the Moroccan duty free and virtually all will enter free by the time it is fully implemented on January 1, 2023. The Morocco FTA does NOT provide a merchandise processing fee (MPF) exemption. The Office of the US Trade Representative provides the final text of the [US-Morocco FTA](#).

On January 1, 2022, the Government of Morocco (GOM) published Circular # 6279/222, announcing its market access commitments under the U.S.-Morocco Free Trade Agreement (FTA) for Calendar Year 2022 ([GAIN report](#)).

The Morocco [Food and Agricultural Import Regulations and Standards \(FAIRS\)](#) report provides an overview of the food laws and regulatory environment in Morocco as it relates to U.S. food and agricultural exports.

Section 4: Market Sector Structure and Trends

Morocco remains primarily a bulk commodity market for U.S. wheat, corn, and soybean products with limited opportunities for consumer-oriented goods. U.S. high-value consumer-oriented goods are disadvantaged by small market size, low consumer spending, and close proximity, cultural, and economic ties to Europe. Opportunities in this area will be limited overall but greatest in the food processing sector.

Retail Products Sector: See the [Morocco Retail Annual](#).

Food Processing Ingredients Sector: See the [Morocco Food Processing Ingredients Annual](#).

Hotels, Restaurants, and Institutional (HRI): See the [Morocco Food Service-Hotel, Restaurant Institutional Annual](#).

Section 5: Agricultural and Food Imports

The USDA Foreign Agricultural Service's [Global Agricultural Trade System](#) includes international agricultural, fish, forest and textile products trade statistics dating from the inception of the Harmonized coding system in 1989 to present.

Best Product Prospects Categories

Products present in the market that have good sales potential:

- Feed grains (corn and DDGS)
- Soybean and soybean meal
- Dried fruit and nuts
- Rice
- Dairy products
- Live animals and genetics
- Pulses
- Poultry and beef meats
- Animal fats
- Beer & Spirits

Products not present in significant quantities but which have good sales potential:

- [Food Service](#)
- [Retail Products](#)

Products not present because they face significant barriers:

- Seed Potatoes, no market access
- Aquaculture feed
- Cotton seed
- Meat of swine (Pork), no market access
