

Required Report: Required - Public Distribution

Date: October 16,2020

Report Number: UP2020-0045

Report Name: Grain and Feed Quarterly

Country: Ukraine

Post: Kyiv

Report Category: Grain and Feed

Prepared By: Denys Sobolev

Approved By: Robin Gray

Report Highlights:

Updated production, consumption and trade estimates both for marketing year (MY)2019/20 and MY2020/21

This report is intended to finalize trade and consumption estimates for MY2019/20 as well as update production, trade and consumption estimates for MY2020/21 against the estimates included in our previous [Grain and Feed Quarterly UP2020-0031](#).

For more comprehensive information about grain production in Ukraine, please refer to [our Grain and Feed Annual UP2020-0015](#).

Production

At the time of this report, the harvesting of winter crops has been completed, while spring crop harvesting was in process. Based on the Ministry of Economic Development Trade and Agriculture's (MEDTA) reports, FAS Kyiv sets the following production estimates for MY2020/21:

- Wheat, produced 25.1 million metric tons (MMT) harvested from 6,600 thousand hectares (ha);
- Barley – 7.8 MMT from 2,400 thousand ha;
- Corn – 33MMT from 5,400 thousand ha;
- Rye – 462 thousand MT from 134 thousand ha.

According to the information available to FAS Kyiv, production estimates for the Crimean Peninsula:

- Wheat – 649 thousand MT from 308 thousand ha;
- Barley – 355 thousand MT from 215 thousand ha;
- Rye – 2.3 thousand MT from 2.2 thousand ha;
- Corn – 25 thousand MT from 3.2 thousand ha.

Note: that all numbers above are presented in bunker weight, while in USDA's PSDs the numbers are subsequently converted into net weight. Both corn production estimates (Ukraine and Crimea) are based on a snapshot of the harvest progression at the time of the report writing and will be revised as soon as harvest has been completed.

Trade

At the time of this report MY2019/20 trade data has concluded for all grains, with the exception of corn.

MY2019/20 barley exports reached almost 5MMT, a 40 percent increase compared to the previous MY. MY2019/20 exports to Saudi Arabia (a major customer for Ukrainian barley for many years) dropped to 1.4 MMT. This represents a 40 percent decrease compared to the previous marketing year. In contrast, there was a spike in Ukrainian exports to a number of other markets: China – almost a 3 fold increase; Spain and Turkey – imported 373 thousand MT and 325 thousand MT, respectively. In MY2018/19 Spain and Turkey had virtually no imports of barley from Ukraine. A similar picture exists with respect to increased Ukrainian exports to Algeria, Tunisia, Egypt and Israel.

Total corn exports were 28.3 MMT for the period October 2019 to June 2020, similar to Ukrainian corn exports during the period October 2018 to June 2019. Exports to the European Union (EU) dropped to almost 10.2 MMT, a 28 percent decrease compared to the previous period. At the same time Ukraine's

corn exports to China grew to 5MMT, a 32 percent increase compared to the previous period. Additionally, Ukraine's corn exports to Iran jumped to 1.2MMT (a 60 percent increase) and to South Korea jumped to 2MMT (almost six fold increase).

From October 2019 to June 2020, Ukraine's imports of corn slid to 28.4 thousand MT, a 16 percent decrease compared to the period October 2018 June 2019. Since Ukraine predominantly imports seed corn, intended for planting, this decrease may be associated with the growing localization of seed corn production in Ukraine by major seed companies.

MY2019/20 wheat exports rose to 20.5MMT, a 32 percent increase against the previous marketing year. The main drivers of growth were exports to Egypt – 3.8MMT (a 94 percent increase); Bangladesh – 2.3MMT (a 77 percent increase); and Turkey – 1.4MMT (a 3.8 fold increase).

Ukraine increased both exports and imports of wheat flour and products by 10 and 13 percent, respectively in MY2019/20. Please refer to the Trade Statistics section for more details about trade with specific countries.

Rye has become a marginal crop for Ukraine and its trade fluctuates in line with production volumes.

Consumption

Post has adjusted domestic feed consumption for all crops for both MY2019/20 and MY2020/21 against the numbers in [our Grain and Feed Annual UP2020-0015](#) taking into account production and trade estimates discussed in the relevant sections above. See the Estimated Feed Consumption table, below, for the latest estimates.

Estimated Feed Consumption

	MY2018/2019	MY2019/2020	MY2020/2021
Barley	2,900	3,400	2,900
Corn	5,000	5,100	5,100
Rye	2	2	2
Wheat	3,400	2,200	3,200
Total	11,302	10,702	11,202

Source: FAS-Kyiv Estimates

Policy

The MY2020/21 growing season was hampered by a lack of precipitation and hot weather that resulted in lower grain yields, especially for spring crops, including wheat and rye. This resulted in intensive discussions between farmers, traders, millers and officials regarding exportable amounts for the major grains. For more information, please refer to our [GAIN Report UP2020-0036](#).

Production, Supply and Distribution Data Statistics:

Wheat

MY2020/21 Post's production forecast is eight percent lower compared to the USDA's official number based on numbers included in Production section.

MY2018/19 and MY2019/20 Post's import estimates are 37 and 21 percent lower, respectively, compared to the USDA's official numbers based on available trade data.

MY2020/21 Post's export forecast is 14 percent lower compared to the USDA's official number based on production forecast.

MY2018/19 and MY2019/20, Post's feed and residual consumption estimates are 36 percent higher and 11 percent lower, respectively, compared to the USDA's official numbers based on arguments included in Consumption section.

MY2020/21, Post's feed and residual consumption forecast is 28 percent higher compared to the USDA's official number based on arguments included in Consumption section.

Both MY2018/19 and MY2019/20, Post's FSI consumption estimates are two percent lower compared to the USDA's official numbers based on stable levels of wheat for human consumption.

MY2020/21, Post's FSI consumption forecast is two percent higher compared to the USDA's official number based on stable levels of wheat demand for human consumption.

Please be advised that in the PSD table below, both export and import volumes for flour and wheat products (HS Codes 1101, 190219, 190230, 190240) are converted to wheat grain equivalent by multiplying the product weight by 1.368 and added to export volumes for wheat (HS Code 1001) in order to present a comprehensive picture of wheat trade by Ukraine.

Barley

MY2020/21 Post's production forecast is 14 percent lower than USDA's official number based on numbers included in Production section.

MY2018/19 and MY2019/20 Post's import estimates are around 11 percent and 80 percent lower, respectively, compared to USDA's official numbers based on available trade data.

MY2020/21 Post's export estimate is two fold higher than USDA's official number based on the fact that decreased barley production volumes might stimulate imports as was the case in the previous MYs.

MY2020/21 Post's export forecast is 24 percent lower than USDA's official number based on production and consumption forecasts.

MY2019/20 Post's feed and residual consumption estimate is 10 percent higher compared to USDA's official numbers based on total feed estimates discussed in Consumption section.

MY2020/21 Post's feed and residual consumption forecast is three percent lower compared to USDA's official numbers based on total feed forecasts discussed in Consumption section.

MY2019/20 Post's FSI estimate is 14 percent lower compared to USDA's official numbers based on relatively stable consumption patterns for this crop.

MY2020/21 Post's FSI forecast is 14 percent lower compared to USDA's official numbers based on relatively stable consumption patterns for this crop.

TY = Trade Year, which for Barley begins in October for all countries. TY 2020/2021 = October 2020 - September 2021

Corn

MY2020/21 Post's production forecast is 17 percent lower compared to the USDA's official number based on arguments discussed in Production section.

MY2018/19 and MY2019/20 Post's import estimates are 13 percent lower and 50 higher, respectively, compared to the USDA's official numbers based on available trade data.

MY2020/21 Post's import forecast is 2 fold higher compared to the USDA's official number based on assumption that corn would retain its popularity among Ukrainian farmers in 2021.

MY2019/20 Post's export estimate is three percent lower compared to the USDA's official number based on available trade data.

MY2020/21 Post's export forecast is 20 percent lower compared to the USDA's official number based on production and consumption forecasts.

MY2018/19 and MY2019/20 Post's feed and residual consumption estimates are around nine and 13 percent higher, respectively, compared to the USDA's official numbers based on arguments included in Consumption section of our Annual Report.

MY2020/21 Post's feed and residual consumption forecast is 19 percent higher compared to the USDA's official number based on arguments included in Consumption section.

MY2019/20 Post's FSI consumption estimate is around four percent higher compared to the USDA's official number, based on stable consumption patterns.
