#### Estimate for MY 2010 (began January 2011)

Post revises its 2010 annual estimate for Vietnam's total rice paddy production for MY 2010 up from 40.40 to 40.84 million tons, due mainly to a larger spring crop area.

According to the Ministry of Agriculture and Rural Development (MARD), the planting area for the spring crop increased about 35,000 hectares in the upland and highland areas of northern Vietnam.

In southern Vietnam, specifically the Mekong River Delta, MARD's numbers showed that the harvested area reached 1.62 million hectares, which represents an increase of 51,000 hectares over Post's estimate of late March 2011.

Post revises its estimate of the total harvested area for the spring crop from 3.03 million hectares to 3.11 million hectares for MY 2010.

As a result, total MY 2010 rice paddy production is revised from 40.40 million tons to 40.84 million tons.

#### **MRD Rice Production**

According to MARD reports, the rice harvest in the Mekong River Delta has been completed. MARD's newest numbers from May show an increase of 51,000 hectares over Post's April estimate. The average yield is reported at 6.56 tons per hectare, slightly lower than Post's estimate and about the same as MY 2009's yield.

Mekong River Delta farmers have been planting the autumn crop ever since finishing the spring crop harvest. As of May 15, the planting area was reported at 1.15 million hectares. The planting progress was three percent ahead of that in the same period of last year.
